

10 scripts, search-phrase first — July 30 2026

For Bailey. Ten videos, ready to film. Five on the Korean-vs-US sunscreen thing (the urgent one), five that show the app doing something real.

The one new rule in all of these: say the search phrase out loud in the first two seconds, put it on screen, and open the caption with it. TikTok search is now where about half of Gen Z starts looking for products, so the first two seconds are doing double duty: hooking a scroller AND telling search what this video is about.

Everything here is verified. The SPF numbers are Consumer Reports testing. The product counts were re-checked against the live database today. The Retinol + Glycolic Acid conflict in SS-2 is a real HIGH-severity row. Your Beauty of Joseon Relief Sun is really in your routine, so SUN-4 is true as written.

Post order: SUN-1 first (the Sephora window is the clock). Then SS-1 or SS-3. Then space the rest across two weeks. Five to seven a week total, not ten.

PART 1 — The sunscreen five

The facts: Korean sunscreens sold in US stores are reformulated with FDA-approved filters and test weaker. Beauty of Joseon **SPF 36 in Korea vs 19 here**. Innisfree **48 vs 16**. Round Lab **46 vs 16**.

Three things that have to stay in, every time. They're what make it true instead of clickbait: 1. The Korean advantage is **protection, not feel**. The testers found them greasy and white-casting. Never say they feel nicer. 2. **Even the Korean ones tested under their own SPF 50+ labels.** The story is "weaker than the Korean version," not "Korean delivers 50." 3. **The gap is closing.** FDA approved a new filter (bemotrizinol) in June 2026, the first since 1999.

Framing is always *"know which bottle you're holding,"* never *"Korean good, American bad."*

SUN-1 — "It changed before it got here" (post this one first)

Search phrase: korean sunscreen at sephora

Hook (0-3s) — holding a sunscreen tube, tapping the SPF number: > "Korean sunscreen at Sephora. Before you grab it this fall, the number on that box already changed."

Time	What you say
3-9s	“Olive Young just opened its first US store, second one next month, and their K-beauty sections hit like six hundred fifty Sephoras this fall. Millions of people are about to buy Korean sunscreen for the first time.”
9-19s	“Here’s what almost nobody says out loud. The versions sold in US stores are reformulated with FDA approved filters, and when Consumer Reports tested them, Beauty of Joseon came in at thirty six in Korea and nineteen here. Innisfree, forty eight versus sixteen.” <i>(point at the numbers, let them sit)</i>
19-28s	“And to be fair, even the Korean originals tested under their fifty plus labels, and the testers found them kind of greasy. So this is not Korean good American bad. It’s two different products in the same packaging, and you should know which one you’re holding.”
28-34s	Closer: “I co-created an app for exactly this. Six thousand K-beauty products, and it tells you which ones are actually yours. It’s called Seoul Sister.”

On screen: frame one korean sunscreen at sephora . At 9s hold up your phone with a Notes table: B0J 36 → 19 · Innisfree 48 → 16 · Round Lab 46 → 16 (Consumer Reports) . Jump cuts only.

Caption: korean sunscreen at sephora... the number on the box changed before it got here. I co-created Seoul Sister, seoulsister.com 🛒 #koreansunscreen #kbeauty #sephora #beautyofjoseon #oliveyoung

SUN-2 — “It’s not a scandal, it’s 1999” (pure education, no pitch)

Search phrase: why is korean sunscreen different in the us

Hook (0-3s) — holding the bottle, flipping to the back: > “Why is Korean sunscreen different in the US? It’s not a scandal. It’s a law older than me.”

Time	What you say
3-13s	“The FDA regulates sunscreen as an over the counter drug, and until last month it had not approved a single new UV filter since 1999. Korean formulas use newer filters that were never approved here. So to sit on a US shelf, the brand has to rebuild the whole formula from the old ingredient list.”
13-23s	“When Consumer Reports tested the rebuilt versions, they came in way under the Korean ones. Beauty of Joseon, thirty six versus nineteen. Round Lab, forty six versus sixteen. And honestly, even the Korean originals tested under their fifty plus labels. Just much less under.”
23-32s	“The good news is the FDA finally approved a new filter in June. Bemotrizinol. First one in twenty seven years, so this gap should start closing. Until then, just know which version you’re buying. That’s it. That’s the whole video.”

No CTA. Nothing pinned. This is the control video and the pure-value one.

Caption: why is korean sunscreen different in the us? a 1999 law, a rebuild, and one new filter that just changed things #sunscreen #koreanskincare #kbeauty #skintok

SUN-3 — Reply-to-comment: “is korean sunscreen better”

Film this as a reply to a real comment. If nobody’s asked yet, wait until they do. Don’t fake one.

Search phrase: is korean sunscreen better

Hook (0-3s) — reading the comment sticker: > “Is Korean sunscreen better. Okay, nurse answer: it depends which country your bottle came from.”

Time	What happens
3-17s	The demo. Screen-record asking Yuri: “ <i>is the US version of Beauty of Joseon sunscreen the same as the Korean one?</i> ” Let the real answer render. Say nothing. Let them read it.
17-28s	“So that’s the app I helped build, and short version: the US versions are legally rebuilt with older FDA filters and tested a lot weaker. But the Korean ones also came in under their own labels, and the test panel found them greasy. So ‘better’ is doing a lot of work in that question. For me, the sunscreen I’ll actually rewear every single day wins.”
28-30s	Nothing spoken. End on the app screen.

Pinned comment: the app is seoulsister.com (I co-created it)

Caption: is korean sunscreen better? asked the app instead of guessing. co-created this one with my dad #koreansunscreen #kbeauty #sunscreen #beautyofjoseon

SUN-4 — “My favorite sunscreen has a twin” (personal, no pitch)

✅ **Checked:** you really do have **Beauty of Joseon Relief Sun** in your routine, so this is true as written.

Search phrase: beauty of joseon sunscreen review

Hook (0-3s) — holding the bottle, a little sheepish: > “Beauty of Joseon sunscreen review, from someone who just found out her favorite sunscreen has a twin.”

Time	What you say
3-12s	“I bought this because everyone bought this. And I liked it. Then I read the Consumer Reports testing, and the version sold in US stores tested at SPF nineteen. The Korean market version tested at thirty six. Same brand, same look, two different formulas.”
12-22s	“And nobody exactly lied to me. The US one is legally a different product. It has to use FDA approved filters, so they rebuilt it. Even the Korean one tested under its label, so this isn’t a hero and a villain. I just thought I was buying the bottle from the videos, and I wasn’t.”
22-30s	“So now, before I repurchase anything Korean, I check which version I’m actually getting. That’s the whole review. Still like the product. Just know which one you’re holding.”

No CTA. Skincare value with Seoul Sister invisible.

Caption: beauty of joseon sunscreen review... turns out mine had a twin 😊 #beautyofjoseon #sunscreenreview #kbeauty #koreanskincare

SUN-5 — “Which bottle is in your hand” (the 5-second check)

Search phrase: korean sunscreen us version

Hook (0-3s) — two hands, flipping a bottle to the back label: > “Korean sunscreen US version, or the actual Korean one? You can tell in about five seconds.”

Time	What happens
3-10s	“Fastest check: flip it. US sunscreens are regulated as drugs, so the US version has to have a Drug Facts panel on the back. The Korean market bottle doesn’t. Then look at the active filters, because the two lists read completely different.”
10-22s	The demo. Screen-record asking Yuri to compare the two versions’ filters. Let it render in silence. Don’t pre-write her answer, record what she actually says.
22-31s	“And look, neither bottle is a scam. The US one is what’s legal to sell here, the Korean one tested stronger but still under its own label, and the testers didn’t love the feel of either. They’re just different products, and you deserve to know which one you paid for.”
31-35s	Closer: “It’s called Seoul Sister. It reads about fifteen thousand ingredients.”

On screen: during the flip, text: Drug Facts panel = US formula .

Caption: korean sunscreen us version or the real one? the 5 second check. I co-created Seoul Sister, seoulsister.com #koreansunscreen #kbeauty #sunscreens #skintok

PART 2 — The five that show the app

Your real numbers, verified today: about 6,000 products · 553 brands · about 15,000 ingredients. Round down when speaking. **Your own history:** 63 conversations, 246 messages, since February 22. 74 products in your routine. 4 Glass Skin photos. You corrected the AI 7 times and were right 7 times, and a whole feature got deleted because you called it garbage.

Disclosure: you’re an owner-promoter, so say it in the video AND in the first line of the caption. “I co-created this app” covers it.

Never put a TikTok Shop tag on any of these five.

SS-1 — “My dad built me an AI” (the origin story, pin this one)

Search phrase: AI skincare app

Hook (0-3s) — face to camera, hands moving: > “AI skincare app. Okay, so my dad built me one because I would not stop complaining about my skin.”

Time	What you say
3-10s	“I’m a nurse, I live in Austin, and I have been his guinea pig since February. Sixty-three conversations. Two hundred and forty-six messages. It has read every product I own.”
10-18s	Flip to screen recording, slow scroll through your real conversation list with the dates visible back to February. No narration for about 3 seconds.
18-26s	“The part nobody believes: I told it it was wrong seven times. I was right seven times. They deleted an entire feature because I said it was garbage. So yeah, I have opinions and they listen.”
26-32s	“It knows about six thousand Korean products and it still tells me not to buy most of them. That’s the whole personality.”
32-36s	Closer: “I built this with my dad. It’s called Seoul Sister.”

Caption: AI skincare app... my dad literally built me one. I co-created Seoul Sister with him and I’ve been the test subject since February. 63 conversations later, here we are. #askincare #kbeauty #skincareapp #skintok

SS-2 — “It caught this in seconds” (live demo)

 **Checked: Retinol + Glycolic Acid is a real HIGH-severity conflict in the database.** This demo will work.

Search phrase: retinol and glycolic acid together

Hook (0-3s) — already holding your phone up: > “Retinol and glycolic acid together. A real routine had both, and the generic ingredient checker said it was fine. Watch this.”

Time	What happens
3-8s	“Quick disclosure, I co-created this app. Which is exactly why I get to show you it catching things on camera.”
8-22s	Screen recording, no narration. Type into Yuri: “ <i>I use a retinol serum at night and a glycolic acid toner. Is that okay?</i> ” Let the answer stream in live. Hold on the word HIGH for 2-3 seconds.
22-30s	“That’s a high-severity conflict. A real subscriber was running exactly this combo, and the free checker she used said all clear. This thing checks your actual lineup, not each product in a vacuum.”
30-35s	Closer: “It’s called Seoul Sister. It reads about fifteen thousand ingredients.”

The streaming text IS the production value. Do not speed it up.

Caption: retinol and glycolic acid together?? The checker said fine. The app I co-created did not. Watch it catch the conflict live. #retinol #glycolicacid #skincarerroutine #ingredientcheck #kbeauty

SS-3 — “It talked me out of buying. Twice.” (confession)

Search phrase: Medicube review

Hook (0-3s) — mock-guilty: > “Medicube review. Except this is a review of me, because I almost bought two of their products off an ad and got stopped both times. By an AI.”

Time	What happens
3-8s	“Full disclosure, my dad and I built this app, and it still roasts me. I screenshotted the ad and asked before checking out. New rule I live by.”
8-20s	Screen recording of your real conversation. Hold on Yuri’s actual line, no narration: <i>“that’s exactly the film-forming, congestion-trapping texture we just spent two weeks pulling out of your routine.”</i> Hold 3 full seconds.
20-28s	“It remembered what we spent two weeks fixing. I did not. That’s the embarrassing part. It has months of my routine history and it used it against me, lovingly.”
28-33s	“And no, I’m not telling you what to buy instead. That’s the point. There is no instead. I just... didn’t buy it.”
33-36s	Closer: “It’s called Seoul Sister.”

Caption: Medicube review, sort of. The app I built with my dad talked me out of the ad. Twice. Screenshot the ad first, ask before you buy. That’s the whole hack. #medicube #deinfluencing #kbeauty #skincaretok

SS-4 — “What app is that?” (reply-to-comment)

Use a real comment. If nobody’s asked yet, wait. Don’t fake one.

Search phrase: skincare ingredient checker

Hook (0-3s) — comment sticker visible: > “Skincare ingredient checker. Okay, you asked what app I keep using, so let me just show you instead of explaining it.”

Time	What happens
3-7s	“Heads up, I co-created it, so obviously I’m biased. That’s also why I know exactly what to show you.”
7-22s	Screen recording. Grab a product off your own shelf, ask Yuri about it, let the answer stream. One quiet voiceover line: “It’s not scoring the product. It’s checking it against what I already use.”
22-30s	“That’s the difference. A generic checker reads the label. This thing has read my whole shelf, all seventy-four products, for five months. It answers for me, not for everyone.”
30-35s	Closer: “It’s called Seoul Sister. It reads about fifteen thousand ingredients.”

Caption: skincare ingredient checker, answering the comment I keep getting. Yes I co-created it. No it doesn’t tell everyone the same thing. `#ingredientchecker` `#skincareingredients` `#kbeauty` `#skintok`

SS-5 — “Is AI skincare legit?” (contrarian)

Search phrase: `is AI skincare legit`

Hook (0-3s) — deadpan: > “Is AI skincare legit. Honestly? Most of it, no. And I say that as someone who co-created an AI skincare app.”

Time	What you say
3-11s	“I’m a nurse. I’m skeptical for a living. So here’s my actual test for whether a skincare AI is trustworthy: does it ever tell you NOT to buy something? Because most of them are a store wearing a lab coat.”
11-22s	Three quick real receipts, about 3-4s each, minimal narration: (1) Yuri telling you to skip a purchase, (2) Yuri saying that’s one for a dermatologist, (3) Yuri saying keep what you already have.
22-30s	“Ours turns down sales. It sends people to actual dermatologists. And when I told it it was wrong, seven times, the humans behind it deleted a whole feature instead of arguing with me. That’s the bar. Hold every AI to it.”
30-36s	Closer: “I co-created this. Six thousand products, and it tells you which four are yours.”

On screen: label each receipt with one word — skip. / see a derm. / keep yours.

Caption: is AI skincare legit? Mostly no. Here’s my test, from someone who co-created one: does it ever refuse to sell to you? #aiskincare #skincaretok #kbeauty #deinfluencing

Filming notes for all ten

- **Phone only.** No transitions, no beige cards, natural light. Polished content underperforms right now — it reads as an ad.
- **Every screen recording has to be a real conversation.** Never stage the text. The realness is the whole asset.
- **Search phrase spoken in the first 2 seconds, on screen, and opening the caption.** All three.
- **Disclosure in-video and in the first caption line** on anything that mentions Seoul Sister.
- **Under 60 seconds**, ideally 21-34. That’s where completion rates are best.
- **Re-check the product counts before filming** any closer that cites them. They grow.
- **Never a Shop tag on a video that mentions Seoul Sister.** That rule doesn’t bend.

How we'll know if this worked: not views. We're watching for people arriving at seoulsister.com from your link and actually talking to Yuri. That number is currently zero, so anything above zero is real news.
